It!

Can you work out what each group is?

Things That Are Alive

Things That Were Once Alive

Things That Have
Never Been Alive

How do we know if something is alive?

Talk
about
It!

What do living things do?

There are certain things all living things do:

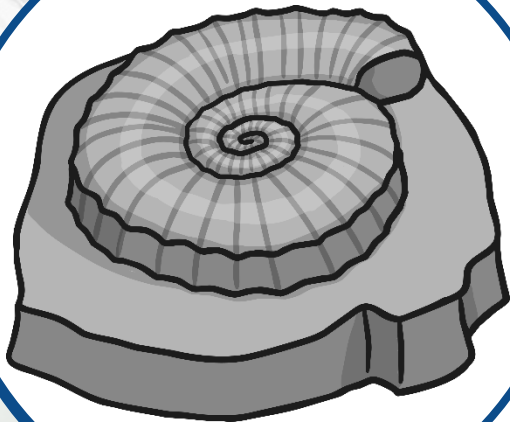

- move – think about how a flower will open up towards sunlight
- make more of their own type – humans and other animals have babies, birds will lay eggs
- respond to the place they are in – if a plant is in a dark place, it will try to grow towards the light
- feed – animals will eat food, plants will suck up goodness from soil
- grow
- get rid of waste – like when humans go to the toilet
- need oxygen

Is it alive?

What living things can you think of?
Remember, they need to be able to do all seven things.

Talk
about
It!

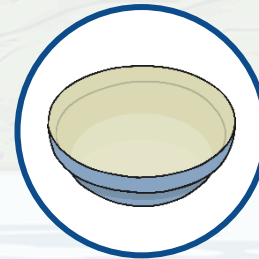

Fossils are the remains of animals that lived a long time ago.

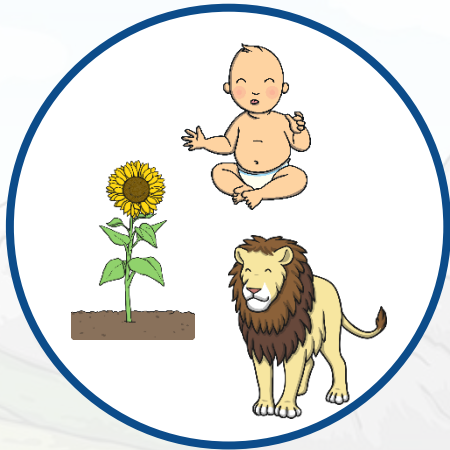

Other things have never been alive. We know they have never been alive because they aren't made from something that could do all of the seven things.

Living, dead or never alive?

Decide whether each thing is living, dead or has never been alive. Then, click to see if you were right.

Living, dead or never alive?

Living

Dead

Never Alive
