

Year 1 Science Week Beginning 11.05.20

Animal Diets

So we've learned about the things dinosaurs eat, what we eat and now we're going to see what animals in Britain eat and learn a little more about them too.

1. Watch the video clips about the seal, fox and deer. These are all British mammals and we actually have deer, foxes and seals here in Devon!
2. Decide which animal is an omnivore, herbivore and carnivore. How do you know this? The BBC Bitesize video talking about the different animal diets is there if you need a reminder.
3. Create a factfile for a fox, seal or deer. Make sure you include what they eat and if they are herbivores, carnivores or omnivores. You can use the example to help you with the layout and what to include or design your own! You can check your facts using the PowerPoint.

* Write 3 or more facts about your chosen animal.

** Write 5 or more facts about your animal.

*** Write 7 or more facts about your animal.

To continue your learning you could:

- Find out about some different British animals and what they like to eat.
- Make or draw some British animals with the food they like to eat.

Rabbit

Rabbits live...

in warrens which
is the name for
tunnels they dig.
They live all over
the world but in
Britain they are
usually found in
the countryside or
woods.

Rabbits eat...

grass, weeds,
clover and other
fruit or vegetable
plants. This
makes them
herbivores.

Rabbits survive...

by hiding from predators in the day in
their warrens then coming out when
the sun is rising or setting. This makes
it harder for them to be spotted!
